

Harnessing the power of health care information to create healthy Montana communities

NOTICE

This facility participates in the Big Sky Care Connect (BSCC) health information exchange, which gives qualified medical professionals access to accurate, current patient information, and helps them provide better quality care. Providers who are caring for you can access your data on a secure, controlled, and private network.

Having your information included in BSCC can help healthcare providers deliver better care and could even save your life. In an emergency, health care providers might use the health information exchange to instantly access your important health records, including allergies, medications, and medical conditions.

We encourage you to discuss any potential optout request with your provider regarding the extent to which you do or don't want your health information shared, and how your provider can accommodate the request.

For more information, please see mtbscc.org/bbcc-patients
