

Connecting our providers for a healthier Montana.

Who is Big Sky Care Connect (BSCC)?

Formed in 2018, Big Sky Care Connect is a statewide health information exchange (HIE) that allows for secure electronic sharing of Montanan's health records. This generates streamlined communication between providers, payors, and patients.

WHY IS THE HIE IMPORTANT FOR PROVIDERS? Access to the right information at the right time empowers the provider to give the most comprehensive care to their patients. Montana providers experience fragmented health information due to a lack of integration between different EHRs. BSCC's state-wide HIE is a solution for better health outcomes, lower costs, and healthier communities.

HOW WILL MY PRACTICE/ORGANIZATION BENEFIT FROM HIE?

Improve patient safety: see the most current medication list and track medication fills to prevent harm to patients from adverse reactions and overutilization of narcotics.

Avoid readmission: receive Admission, Discharge, Transfer (ADT) alerts from hospitals and emergency rooms for timely patient follow-up.

Increase efficiency and patient satisfaction: reduce faxing, phone calls, and passwords (single sign-on) to track down patient records so you have more time with the patient medical record.

Enhance care coordination: track referrals and increase communication with other members of the health care team with Secure Messaging.

Montana's Premier Health Information Exchange
